Plot a pH curve for the titration of 20.0 mL of $0.300 \mathrm{~mol} / \mathrm{L}$ hydrochloric acid with $0.200 \mathrm{~mol} / \mathrm{L}$ sodium hydroxide.
$\mathrm{HCl}(\mathrm{aq})+\mathrm{NaOH}(\mathrm{aq}) \rightarrow \mathrm{NaCl}+\mathrm{H}_{2} \mathrm{O}(\mathrm{I})$
First, calculate the volume of sodium hydroxide required to reach the endpoint of the titration.

$$
\begin{aligned}
& \text { endpoint } \frac{C_{a} V_{a}}{R_{a}}=\frac{C_{b} V_{b}}{R_{b}} \therefore \mathrm{Vb}=\frac{C_{a} V_{a} R_{b}}{C_{b} R_{a}} \\
& V_{b}=\frac{(0.300 \mathrm{M})(0.0200 \mathrm{~L})(1)}{(0.200 \mathrm{M})(1)}=0.0300 \mathrm{~L} \text { or } 30.0 \mathrm{~mL}
\end{aligned}
$$

The pH at the endpoint of a titration of a strong acid with a strong base will equal seven.
Next, select volumes of sodium hydroxide for the data table. Initially, the volume of NaOH should increase in large increments, but as you approach the endpoint, the increments should become smaller and smaller.

| Volume of NaOH <br> added (mL) | pH |
| :---: | :---: |
| 0 |  |
| 10.0 |  |
| 20.0 |  |
| 25.0 |  |
| 27.0 |  |
| 28.0 |  |
| 29.0 |  |
| 29.5 |  |
| 29.9 |  |
| 30.0 (endpoint) |  |
| 30.1 |  |
| 30.5 |  |
| 31.0 |  |
| 32.0 |  |
| 35.0 |  |
| 50.0 |  |
| 60.0 |  |

Next, calculate the pH for each of the volumes selected for the data table.

0 mL of base added
At this point, only acid is present. HCl is a strong acid: $\mathrm{HCl} \rightarrow \mathrm{H}^{+}+\mathrm{Cl}^{-}$ $\left[H^{+}\right]=0.300 \mathrm{M} \therefore \mathrm{pH}=-\log (0.400)=0.523$

10 mL of base added

$$
\begin{aligned}
& \mathrm{mol} \mathrm{H}^{+}=(0.300 \mathrm{M})(0.0200 \mathrm{~L})=0.00600 \mathrm{~mol} \mathrm{H}^{+} \\
& \mathrm{mol} \mathrm{OH} \\
& \text { excess }=(0.200 \mathrm{M})(0.0100 \mathrm{~L})=0.00200 \mathrm{~mol} \mathrm{OH}^{-} \\
&=0.00400 \mathrm{~mol} \mathrm{H}^{+} \\
& {\left[\mathrm{H}^{+}\right]=(n \div \mathrm{V}) }=0.00400 \mathrm{~mol}_{-0}=0.0300 \mathrm{~L}=0.133 \mathrm{M} \\
& \therefore \quad \mathrm{pH}=-\log (0.133)=0.875
\end{aligned}
$$

20 mL of base added

25 mL of base added
$\mathrm{mol} \mathrm{H}^{+}=(0.300 \mathrm{M})(0.0200 \mathrm{~L})=0.00600 \mathrm{~mol} \mathrm{H}^{+}$
$\mathrm{mol} \mathrm{OH}=(0.200 \mathrm{M})(0.0250 \mathrm{~L})=0.00500 \mathrm{~mol} \mathrm{OH}^{-}$
excess $\quad=0.00100 \mathrm{~mol} \mathrm{H}^{+}$
$\left[\mathrm{H}^{+}\right]=(\mathrm{n} \div \mathrm{V})=0.00100 \mathrm{~mol} \div 0.0450 \mathrm{~L}=0.0222 \mathrm{M}$
$\therefore \mathrm{pH}=-\log (0.0222)=1.65$
27 mL of base added
$\mathrm{mol} \mathrm{H}=(0.300 \mathrm{M})(0.0200 \mathrm{~L})=0.00600 \mathrm{~mol} \mathrm{H}^{+}$
$\mathrm{mol} \mathrm{OH}=(0.200 \mathrm{M})(0.0270 \mathrm{~L})=0.00540 \mathrm{~mol} \mathrm{OH}^{-}$
excess $\quad=0.00060 \mathrm{~mol} \mathrm{H}^{+}$

$$
\left[\mathrm{H}^{+}\right]=(n \div \mathrm{V})=0.00060 \mathrm{~mol} \div 0.0470 \mathrm{~L}=0.0128 \mathrm{M}
$$

$$
\therefore \quad \mathrm{pH}=-\log (0.0128)=1.89
$$

28 mL of base added
$\begin{aligned} \mathrm{mol} \mathrm{H} & =(0.300 \mathrm{M})(0.0200 \mathrm{~L})\end{aligned}=0.00600 \mathrm{~mol} \mathrm{H}^{+}{ }^{+}=(0.200 \mathrm{M})(0.0280 \mathrm{~L})=0.00560 \mathrm{~mol} \mathrm{OH}^{-}$.
$\left[H^{+}\right]=(n \div V)=0.00040 \mathrm{~mol} \div 0.0480 \mathrm{~L}=0.00833 \mathrm{M}$
$\therefore \mathrm{pH}=-\log (0.00833)=2.08$
29 mL of base added

$$
\begin{aligned}
